

Recycling Facts...

Recycling is an excellent way of saving energy and conserving the environment. Did you know that:

- Over 20,000 tonnes of batteries are sent to landfill site in the UK each year. It takes 50 times more energy to make a battery than it gives during its life.
- Every tonne of paper recycled saves 17 trees.
- It has been calculated that, before they are toilet trained, the average child goes through 3,796 nappies, most of which end up buried in landfill sites.

New Recycling Area

We now have a designated recycling area at our nursery. Please use the bins to recycle your clothing, shoes, belts, towels, used stamps, batteries and unwanted bras.

Needed

If you have any empty washing up liquid bottles or any sized plain paper please bring them into nursery. We also need more 2 litre bottles for the following project...

Re-Use

You may notice that we have recycled plastic bottles in our plant pots around the nursery. Each morning the children fill the bottles with water, then place them into the plant pots so that they can be watered all day long as the water glugs into the soil. The children are fascinated by this and love to watch the water disappear!

Growing

Earlier this year we reaped our crop of radishes. At the moment, we are growing cress, tomatoes and spring onions. The children have been checking on their growth regularly.

Allotment

The eager eyed amongst you will have noticed that we have removed the silver birch tree from our patio area and relocated the play house to the lawn. During August, we will be having a new surface laid. This will greatly increase and enhance our allotment area and the children will be able to plant more.
